Abstract (en)
The money refund device of the invention comprises a coin receiving chamber of which the bottom or part of its wall is comprised of a rotating disk (1) which is traversed by retractable blades (7) capable of entraining the coins (3) during the rotation of the disk. Said blades are displaceable between an extracted position wherein they project partially from the disk surface to entrain the coins (3) and a retracted position wherein they do not project with respect to said surface. The blades (7) are elastically impulsed towards the extracted position and are displaced towards the retracted position when reaching the position of an arm or needle (5) which restricts the outlet opening for coins (3). <IMAGE>
