Abstract (en)

[origin: EP0957464A2] The method uses at least two points or lines (1,2,3) in or on the road. The points or lines are placed at a definable distance from each other. The respective information is encoded by the respective distances between the points or lines and/or by magnetic, electric or other polarisation. The vehicle has a sensor device (10) and a sensor analyser (11) which detects the encoded information and marks it. Independent claims also cover an apparatus for carrying out the method.
