Abstract (en)  
[origin: WO9930074A1] The invention relates to an insulation element (1) based on non-wovens which is characterized by fulfilling one or more requirements such as a high sound absorption and sound deadening, high heat insulation and low formation of condensation at large temperature gradients and at large atmospheric humidity gradients. In order to provide an insulation element based on non-wovens, the invention provides a layer construction comprised of various non-wovens such as bulked non-wovens or melt spun non-wovens.
