Abstract (en)
[origin: US6252205B1] A mounting arrangement for a cooking surface is provided. The cooking surface has an edge at one end thereof which is rounded and which is at least partially surrounded by a plastic frame or frame sections. The cooking surface can be supported on the frame or by the frame sections in an opening in a work-plate. The frame or frame sections include a support section which supports a bottom surface of the cooking surface. The frame or frame sections are made of a heat-resistant plastic reactive foam. The reactive foam is injection molded or foamed into a mold in which the cooking surface is housed. In this manner, a mounting arrangement can be easily manufactured without affecting the stability of the cooking surface.
