Abstract (en)

[origin: WO9930214A1] Disclosed is a programmable electronic device with a graphic program display system, especially for controlling, regulating and/or monitoring installations in buildings. Said device comprises a timer and/or a control device (1) with an electronic microcontroller (20), an electronic storage mechanism (25), a program input keyboard (3), an optoelectronic display (2) and at least one electronic-mechanical control and/or regulating station (14) connected by wires or wireless to the timer and/or control device (1). The timer and/or control program or the status program and the program bars shown on the display (2) of the timer and/or control device (1) are exclusively limited to the actual timer and/or control or status program segment (9). Non-current time segments of an overall program time space are not displayed. The displayed program time space is subdivided into individual daily time segments (9).
