Abstract (en)

[origin: EP0958928A1] The printer has a print head (1) and a print roller (2). A spring (3) presses the print head against the paper (20), pressing it against the print roller. The paper is also driven by another pair of rollers (35,36). The print roller (2) is driven (32) in rotation when the paper is in place, and is decoupled from the drive to allow entry of paper between the print head and roller.
