Abstract (en)
[origin: EP0958962A2] The lever switch has a housing (1) with a connection contact, a switching lever (10) mounted in the housing, a switching element which acts upon a switching contact track (24) and that is actuated by the lever and a switching crank (14) that restores or locks the lever. Different functions can be implemented by using different separations of the contact tracks, different allocation and/or values of resistances for the tracks and different, replaceable switching cranks.
