Abstract (en)
There is provided a pack formed of a length of material having an inner surface capable of adhering to other regions of the same inner surface, the pack having a seal formed by the inner surface of one edge region of the pack being peelably sealed to the inner surface of the opposite edge region of the pack, with only the one edge region being readily manually grippable and with the opposing edge region being restrained, the arrangement being such that, in use, when the one edge region is gripped and pulled away from the opposing edge region, the seal opens to reveal the interior of the pack but only in a region adjacent to the one edge region.
