Abstract (en)
[origin: EP0959207A2] The system has control elements connected to a controller via voltage supply lines (31,32) . The voltage supply lines contain a switch (34) that can be operated to drive a control element by a switch that is switchable by an encoded signal. The switch is mounted immediately adjacent to the drive for a control element. The coded signals are fed to the switches via signal lines (35) connected to the controller.
