Abstract (en)

[origin: WO9726808A1] The invention relates to a storage system (1) comprising shelves and cabinets constructed from pieces of sheet material. Pairs of mounting rails (7, 8), which are arranged to be supported horizontally at a mutual distance from one another, exhibit means for setting up the rails on a wall (10), upright or other support intended for that purpose at the location where the storage system is installed. At least the upper and the lower shelves (4, 5) are so arranged by means of connecting devices as to be detachably attached to the aforementioned matching mounting rails (7, 8). Pieces in the form of sheets are so arranged by means of securing devices as to be capable of vertical installation between the aforementioned upper and lower shelves (4, 5) so as to be supported by said mounting rails (7, 8) to form the sides of installed formed cabinet carcasses. Components included in the system (1) exhibit a finished length at the time of delivery to the location where they are to be set up or have their dimensions adapted in conjunction with the setting-up of the components.
