Abstract (en)  
[origin: DE19704976A1] The invention relates to a gas turbine installation whose combustion chamber housing (7) located between the compressor and the turbine is fitted with solid ceramic material (10) and whose rotor (2) and covering housing sections (1) are provided with blades (3, 4, 5, 6). On the side of the turbine, at least the first rows of blades (3, 5) support ceramic heat-insulating layers. According to the invention, the ceramic material (10) is provided on its surface with a coating (12, 13) which prevents the ceramic surfaces from being "sanded down" thereby avoiding the related destruction of the heat insulating layers.
