Abstract (en)

[origin: WO9836602A1] The present invention relates to a procedure and a system that allows a better mobility for a mobile station (MS) in a wireless local loop. The invention enables the mobile station's mobility area (MA), defined by the home base station (BS) or home cell of the mobile station, to be extended to the areas of other base stations and/or cells connected to the same local exchange (LE).
