Abstract (en)

The container/applicator consists of base (5) and a hinged cap (6) which act as a mold for the product (2) inside. The meeting surfaces (8, 9) of the base and cap are sealed by a projecting rib on one fitting into a matching groove in the other, and the container is filled by pouring the molten product in through a hole (20) in the base (4), which is then fitted with a plug (21).
