Abstract (en)
[origin: EP0960613A2] The vehicle has a seat (20) which is held adjustable at the chassis, using an adjusting drive (26). The drive adjusts the seat depending on the position of the chassis or the seat determined by a sensor unit (27), deviating from a horizontal position. Thus, when negotiating an incline, the overall point of gravity of the vehicle and the user is automatically adjusted in the direction of the sloping surface.
