Abstract (en)

[origin: EP0960671A2] Four pressure cylinders serve as adjustment units located outside the heat radiation zone above the slab guide segment. Four pressure cylinders (4, 4', 5, 5') serve as adjustment units are located outside the heat radiation zone above the slab guide segment. The distance (A) between the pressure cylinders determining the segment width is reduced. The segment cross members are provided with plates for protection against heat radiation. Water-cooled side frames (11) are attached laterally to the bottom frame (8).
