Abstract (en)

Method to automatically re-connect the forming yarn in a spinning machine, the method providing in sequence an inspection step performed by a trolley (21) to identify the spindle (11) in which the forming yarn has been interrupted, a monitoring step to monitor the interruption of the yarn (14) on a spindle (11), a stop step wherein the movable trolley (21) stops with respect to the axis (24), a moving step of a translating structure (23) supporting a yarn-aspiration assembly (31, 48), a yarn-manipulation assembly (28), at least a yarn-blowing assembly (83, 43) and a yarn re-connection assembly (49), a step to position aspiration means (31) above the spindle (11) so as to intercept the interrupted end of the yarn, a step to insert the yarn (14) inside the anti-balloon ring (18), the cursor (22) and the yarn-guiding loop (16), a step to re-connect the end of the yarn already wound on the cop (13) and the yarn arriving from the feed bobbin. Device achieving the method as above. <IMAGE> <IMAGE>
