Abstract (en)

[origin: EP0960981A2] A mobile, self propelled demolition machine has a telescopic arm (10) with a cutting head eg. cutting shears. The range of operation of the machine is enhanced by mounting the cutting head on a pivot mounted extension to reach into the structure to be broken up. The telescopic arm is fitted to the machine via adapters and the whole system is operated by hydraulics. Different attachments can be fitted eg. excavator buckets for excavating under ground level. For close up work the arm is retracted.
