Abstract (en)
Arrangement (9) for the adaptation of entrances of balconies or terraces having comparatively small surrounding surfaces for people being dependent on a walking frame or a wheel-chair. Two elements (7, 8) built as entering ramps (1) are interconnected enclosing a right angle between themselves. The one unit (7) will then act as a turning-/rest plane while the other unit (8), being arranged at an arbitrary inclination angle to the horizontal all the way down to the present floor of a balcony or a terrace, acts as an entrance ramp. <IMAGE>
