Abstract (en)
[origin: EP0961078A2] The installation (2) has a housing (3) which is built to receive at least one light (4) and a reflector unit (5,6). The installation is fixable in an opening with the aid of attachment elements in the form of attachment springs (10). The springs are located on the housing so as to have an overlap and are adjustable. The installation is pressed into the opening after attachment of the electrical connections. The attachment springs are located in the region of the side surfaces of the housing, and they are adjustable from an attachment position, in which they extend beyond the edge region of the floor, against a pretension inwards in an installed position.
