Abstract (en)
[origin: EP0961257A2] The connection consists of a cylindrical sleeve (1) having an upper peripheral collar (10), a lower conical recess (12) and an outer threaded section (11). A nut (3) is screwed onto the threaded section in order to reduce the support structure between the collar and the nut. A vertical support is inserted into the sleeve via a conical end section (20). The conical recess is provided with deepened contours (13,21), and the end section is deepened in a complementary way in order to prevent unwanted rotational movement of the vertical support.
