Abstract (en)
These devices are used for connection between an internal coaxial cable (CI) forming part of the antenna and an external coaxial cable (CE). They include a monoblock body (1) having two internal and external extremities (10, 11) for connecting the extremities of two cables, the external extremity (11) at least being provided with a packing box (33) to ensure internal imperviousness by cooperating with the outer casing of the coaxial cable. <IMAGE>
