Abstract (en)

[origin: EP0961431A2] A receiver which is capable of selecting an audio output of the receiver from audio outputs of a plurality of signal sources is provided. When a digital broadcast receiving portion has been selected as the signal source, a state of reception of the digital broadcast receiving portion is determined. In accordance with a result of the determination, whether or not the ensemble which is being received has been ended is announced through announcing unit. <IMAGE>
