Abstract (en)

[origin: WO9837003A1] The invention relates to a processing line for printing products (18), comprising a number of component modules (10, 12, 14) arranged directly one behind the other in the direction of processing (V). The component modules can be separated from each other. A conveyor (20) driven by a drive unit (22) extends continuously, fully or in part, through at least two of the component modules. When said component parts are separated, the conveyor (20) can also be separated, whereby a section (33) of the conveyor remains in each of said component parts.
