Abstract (en)
[origin: WO9931338A1] Described is a pivoting lever closure for the door, the sidewall or the like (14) of an electrical control cabinet (12), a machine casing or the like (12), comprising an actuation shaft (20) traversing the door leaf or the like (14), locking devices driven by the actuating shaft (2) such as a sash lock (22) and/or a bar lock (24, 26), a cavity (18) that can be placed on the door leaf or the like (14), an actuating lever (28) which can be pivotally actuated on the actuating shaft (20) around an axis (30) which is perpendicular to the axis (32) of the actuating shaft and which can be blocked in a pivoting position in the cavity (18) by means of a locking device (i.e. a padlock 48) and can be swung out of the cavity (18). The actuating shaft (20) can be rotated by the actuating lever (28) from the cavity in the pivoting position.
