Abstract (en)

[origin: FR2760107A1] The invention concerns a device for converting numerical values between two measurement scales, comprising: a module for acquiring (300) an input numerical value to be converted; a module for converting the input numerical value into a converted numerical value, according to a predetermined function linking two measurement scales corresponding to the input value and the converted value respectively; a module for displaying (100, 200) the input value and the converted value; the acquisition module comprising control means (300) which, when activated by the user, produces an incrementation or decrementation of the input numerical value, such that an input numerical value required by the user can be obtained by simply actuating said control means (300).
