Abstract (en)

[origin: EP0962262A2] The device consists of two loosely connected cleaner bodies (1), which constantly and simultaneously clean sifter frame and base. The bodies are disc-shaped, of a flexible plastic material, and each has projecting cleaner elements (2). These consist of bristles of natural and/or artificial materials, or formed plastic burls. The lower surface of the upper disc has a stud-shaped foot (4) to generate tumbling movements. The foot is held in an opening (5) in the lower disc. Both discs have openings (3) for the sifted material to pass through.
