Abstract (en)

[origin: EP0962330A2] This invention relates to an ink jet recording medium having an ink-receptive coating comprising two layers. The coating is prepared from aqueous-based solutions. The under layer comprises a blend of poly(2-ethyl-2-oxazoline) and hydrophilic, water-insoluble polyurethane, while the upper layer comprises a blend of polysaccharide and water-insoluble polymer. The coated ink jet recording media are capable of forming a high-quality, fast-drying printed image that is free of pigmented ink cracking.
