Abstract (en)

[origin: EP0962372A1] The connection between two parts consists of carrier section (1), a mounting (2) and one or more pressure distribution parts (4), welded (8) together. The parts are braced, using removeable fasteners (3), e.g. screw and nut (3a,b), and are welded to the carrier section while the bracing is maintained. The carrier section is a hollow profile, and the mounting consists of a higher strength material than the carrier section. The welding zone of the pressure distribution part consists of a material, which can be welded to the carrier, and is pref. of a similar material.
