Abstract (en)

An apparatus for automatically packaging live fish comprising a container (4) with an inlet (5) for entering fish and with a bottom that can be opened (9) at least partially. Means (1, 2, 4, 8) are provided for forming a pouch from a web of packaging material so that the mouth of the pouch encloses the part of the bottom of the container that can be opened. When the pouch has been formed, the bottom of the container is opened so as to release the live fish into the pouch. The pouch is finally sealed by sealing means (10). <IMAGE>
