Abstract (en)  
[origin: EP0962410A1] The two king rolls (2,4) form a bed (6) containing at least one winder roller (7) the periphery of which has an additional drive mechanism (9,10) which, at least one the section at the start of the winding process produces at least 15%, especially at least 20%, of the driving power for the winder roller. A control (13) distributes the driving power to the two king rolls and drive ,mechanism. A loading roll (9) has an elastic surface (11).
