Abstract (en)

[origin: EP0962573A2] The bridge comprises a closed frame (3) with two parallel longitudinal guides (10) for upper (11) and lower (12) moving plates, with a mechanism for holding and adjusting toothed belts (6,7) producing a y-direction movement. A stroking cylinder (14) on the upper plate produces z-direction movement on a vertical guide supporting a stitching head holder and needle drive (17). A gripper head holder and electrically driven gripper drive are carried on the lower plate.
