Abstract (en)

It is made up of a guide rail (1) which is attached to the pulley frame system (6) on its upper half and to the crank frame system (5) on its lower half. On turning the said crank one way or the other, the clothes line is raised or lowered by the cable which is attached to the upper part of the frame support triangle (3) and which passes through the pulley (6) and is rolled around the crank (5). The guide rail (1) is in turn attached to the wall by means of the pulley and crank support frames. The runner has four bearings and moves longitudinally along the guide rail (1). This runner is attached to the support frame triangle (3). It has a longitudinal groove on the upper part into which the frame (4) is fitted. At the opposite end it has a shaft to which the cable frame (8) is attached and by which it is turned. The said cable frame bears the cable for hanging the clothes (9). <IMAGE> <IMAGE>
