Abstract (en)

[origin: EP0962707A2] The control unit has a control handle (13) that is tilted or slid from an initial position (17) or from the handle axis into a selection position (19) for selecting a defined operating function, e.g. a certain cooker point. The control handle has a restoring mechanism that automatically returns it to the initial position. An Independent claim is also included for a domestic device, especially a hob or cooker, with a control unit.
