Abstract (en)

The present invention is an imaging resin which includes a polyolefin having dispersed therein rutile TiO<sub>2</sub> having a particle size from 0.1 to 0.26 microns at a concentration of at least 10 weight percent, and a dispersing agent. The resin is applied to a support to create an imaging base. A imaging layer can be superposed on the imaging base to provide an imaging element. In a preferred embodiment the imaging element is a photographic element.
