Abstract (en)

[origin: EP0963139A2] The arrangement has a housing part in which heating elements (2) are mounted with their heating conductors connected via current rails to a plug. A temp. measurement element (19,27) mounted on an end section of the current rails (13) near the heating element protrudes into the heating element. The current rails are connected by a connecting element to an essentially rigid current rail unit. An Independent claim is also included for a method of producing a radiation heating arrangement.
