Abstract (en)

[origin: FR2759706A1] The invention concerns a method for producing cosmetic or therapeutic compositions for external or internal use in known or future galenical preparations. The invention also concerns the use of one or several emitters (1) generating an electromagnetic radiation (2) passing through one or several filters (3, 4, 5). The newly generated energy will reach the clay to be treated. The emitter (1) can consist of a source of a laser beam of known type or of any other electromagnetic radiation (2) or even of electromagnets. The invention aims at exploiting the properties of clay for storing and restoring electromagnetic energy to strengthen the activity of certain medicinal products.
