Abstract (en)

[origin: FR2770420A1] The invention concerns a homogeneous catalytic particle bed, said catalyst comprising at least an amorphous matrix, at least a noble metal, at least an additional metal M and at least a halogen, and in which, for one catalyst particle: Cpt is the local concentration in noble metal; CM is the local concentration in additional metal M; Cx is the local concentration in halogen; catalyst particle bed, wherein the local dispersion of the value Cpt/CM or Cpt/Cx is said to be homogeneous along a particle diameter, which means that at least 70 % of the values Cpt/CM or Cpt/Cx varies at most by 30 % from the mean local ratio. The invention also concerns a method for transforming hydrocarbons into aromatic compounds with said catalyst such as a method for reforming petroleum products and the method for producing aromatics.
