Abstract (en)
[origin: WO9933675A1] The invention relates to an implement for slowing down or stabilizing an object, which implement comprises a first shaft (11) which is rotatably bearing-supported in a housing (1), on which first shaft (11) there is arranged the object which has to be slowed down or stabilized, as well as a slowing down or stabilizing weight (18; 21) which, at least during operation of the implement, is arranged eccentrically and rotatably on the first shaft (11).
