Abstract (en)

[origin: FR2759548A1] The invention concerns a method in which pieces (21) are cut out from a cloth spread (20) constituted by tiered up plies of flexible sheet material and the cloth spread is then completely packed inside a wrapping (70) without separating the cut out pieces from the resulting cuttings. Thus the cloth spread can be transferred between a cutting plant and a workshop where the pieces are assembled, with data transmission concerning the arrangement or each arrangement of the cut out pieces.
