Abstract (en)
[origin: WO9841059A2] The invention relates to a mounting system adapted for mounting a radiant heating element body (5) with spring-loading against the underside of a vitreous ceramic top (4) of a heating or cooking appliance such as a warming plate, hot plate, kitchen stove or cooking range, said spring-loading being provided by a plurality of resilient support brackets (8) extending radially upwards and outwards from a support base (7) from underneath the heating element body (5) into engagement with the marginal region of the latter, the support base (7) being adapted for being mounted in fixed, rigid relationship to the body (1) of the appliance, wherein the resilient support brackets (8) are adapted to press the heating element body (5) against the vitreous ceramic top (4) and to restrain the heating element body against inadvertent lateral displacement.
