Abstract (en)
[origin: EP0963819A1] The knife (10) has two rigid protective pins (17) along a cutter (13) with a blade (12), held so that they can be moved parallel to their longitudinal axis (L) in a sliding guide cavity (19) of a handle (11) against a spring force (F). The pins form a safety arc device (16). The two pin regions extend parallel and spaced out from each other either side of the cutter. The free ends of the pin regions form guide ends (22) bent up above the knife blade tip (15).
