Abstract (en)  
[origin: EP0963836A1] Improvements in rotary machines for the manufacture of tablets, consisting on a rotary assembly with multiple moveable rods that act in the corresponding formation chamber, provided with various outputs (8,9) for the tablets (10,11) produced around the periphery of the rotating portion of the machine, each of which outlets (8,9) receives the tablets (10,11) ejected from the different formation chambers in a previously programmed sequence of activation of the individual ejection rods during the tablet ejection phase by selective action on the ejectors associated with the various punches fitted to the machine. <IMAGE>
