Abstract (en)
[origin: DE19825546C1] The anchor pin (7) forms at least two spring-elastic tongues (9,10). On the tongues are formed radial projections (11,12), which snap-engage in the manner of press buttons behind a stop edge (20) connected to the cladding plate (5). The projections form front inclines (15,16), which with the spring-elastic pivoting of the tongues are pushed into the opening of the cladding plate forming the stop edge.
