Abstract (en)

[origin: EP0964280A2] The optical fibre has a one or two-layer protective coating (7) and a colored identification (11,13). At least one layer of the protective coating (11) is colored and colored markings (13) are applied to the protective coating. A top coating (15) applied over the colored markings extends over the length of the optical fibre. An Independent claim is also included for a method of color identification of an optical fibre.
