Abstract (en)
[origin: WO9839193A1] The invention relates to a frame for railway wagons, comprising top parts (10, 11) on both sides (8, 9) of a frame end (6, 7), said top parts having several holes (14) provided for attaching buffers and a buffer opening (12) for adjusting the variable buffer projection. Said buffer opening is positioned co-axially on the buffer axis and a frame end opening (13) is provided on the extension of the buffer opening axis, in said frame end. Supports for guiding pieces (15, 16) are also located on the sides of said frame end and a front bracket and rear bracket (19, 20) are located between the longitudinal members (2, 3) forming the longitudinal girder. Several front holes (21) for a screw coupling are also provided in said longitudinal members for attaching a drawing gear (22) and several back holes (23) for an automatic coupling (25) are also provided for attaching a buffing and drawing gear (24).
