Abstract (en)
[origin: DE19756242A1] The invention relates to a thread detector (F), especially for a thread sensor in a thread feeding device, comprising a detector foot (A) with an essentially flat rest (B) which can be brought into contact with a thread (Y). The detector foot (A) has an uninterruptable surface (P) at least in the area of the rest (B) of said foot in order to gently handle the thread when swept and above all to prevent contaminants from attaching inside the detector foot (A).
