Abstract (en)
[origin: WO9839506A1] The invention relates to a lifting heald for a device for forming a lens selvedge on a woven or knitted fabric, comprising two lifting healds and a half heald alternately engaged by said lifting healds. The lifting heald has at least one magnet in the area of one end for guiding the half heald, as well as a connector element for engaging the half heald. The distance between and the magnet corresponds roughly to the length of the sides of the half heald and the lifting heald (2, 3) has means for magnetically braking the half heald (50).
