Abstract (en)

[origin: WO9838394A1] The invention relates to a connecting element comprising an insulating body (1) and a compressive reinforcement element (3) running through said insulating body (1). Said connecting element has a cross groove (5) in the top face of the insulating body (1) wherein an open-topped, trough-shaped receiving body (6) which projects over the insulating body (1) on both sides is positioned to accomodate a reinforcement for a tension rod (7).
