Abstract (en)
[origin: WO9839718A1] A distributed diagnostic system in which a plurality of local monitoring devices (12, 13) collect local information concerning various machines (11) and process that information, according to redefined diagnostic parameters, for diagnostic purposes. The local information collected by the plurality of local monitoring devices (12, 13) is provided to a global processor (15) that globally processes the collected information to provide updated diagnostic parameters to the local monitoring devices (12, 13).
