Abstract (en)

[origin: EP0965810A1] The suspension cradle for a heat exchanger, with a member (1) made up of a group of tubes (2) lying in the same plane and connected to a manifold (15), consists of main beams (3) parallel to and perpendicular to the manifold and a transverse support (14). The transverse support is in the form of a triangular beam made up of two frames (21,22) mounted point downwards, with the tube member supported between their lower sections.
